

Logistics Management Information System

Redstone Aviation Group's Logistics Management Information System was developed as a secure, intelligent programmatic tool suited for aerospace and defense systems to support full product lifecycle including modification, maintenance, repair and overhaul of complex equipment and machinery. We implement, customize, and maintain MIS to meet PWS requirements including enhanced situational awareness for program leadership, metrics tracking, EVM-lite management tools, and facilitate collaboration between contractors, customers and approved third-parties.

Key Features:

- Customized dashboard with access to all relevant program information necessary to synchronize efforts
- Enhanced role-based security with full cloud-based encryption and login/password authentication
- Accessible through multiple browsers, platforms, and devices – including mobile
- Built-in support center with a centralized ticketing system for requesting purchases and repairs
- EVM-lite traceability (includes CPI/Variance/EAC etc.)

Benefits:

- **Real-time Information** - by providing real-time visibility of work in process to the shop floor, supported by a real-time problem resolution system that extends into supplier networks.
- **Streamlining & Simplifying** - Streamlining and simplifying complex work instructions and inspection requirements that are specified as part of work instructions, and include data collection and certification requirements
- **Systematic Process Management** - provides delivery of inspection measurements and observations, giving inspectors the option of launching and completing required routine and non-routine instructions.
